

Have you  
**considered**  
all the risks?

<REDACTED>, we're helping you understand and navigate the risks along your journey to success. Sometimes those risks aren't financial ones.

The COVID-19 pandemic has had a huge impact on all our lives, from our family and friends to colleagues and employees. There is something that we can do today to reduce the impact the virus has on us all tomorrow – getting vaccinated.

Getting the vaccine is your choice. We're giving you the facts about the risks so that you can make the best choice for you and those around you, because the greatest risk might be not being vaccinated.

## Few know risk the way we do

That's why we know that the COVID-19 vaccine is the best defence you have against the virus. We understand that you might feel that the vaccine is risky, but it's far riskier to not get one. Our medical experts ensure us that the vaccine is safe and will not jeopardise your health. You can speak to a qualified doctor about any concerns you may have about the vaccine through Hello Doctor.

[Visit Hello Doctor](#)

## It can save your life

The vaccine is not a cure. But getting vaccinated could be the difference between only suffering milder, non-lethal symptoms if you do get COVID-19 and falling gravely ill or possibly losing your life. There are 2 types of vaccines available in South Africa, the mRNA and the protein subunit. Each type prompts our bodies to recognise and protect us from COVID-19. Neither vaccine can give you COVID-19.
