

The Shariah does not permit the introduction of poisons, even if composed of halaal substances, into the body. Besides the harms of vaccination and the fact that vaccination does not come within the scope of *Tadaawi Bil Haraam* (treating sickness with haraam substances) due to vaccination not being medicine, but filth and poison, a few facts will throw some light on the filth of these Covid-19 vaccines.

- The particular cells that are involved in the Johnson & Johnson vaccine are called PerC6 cells. These are retinal cells that came from a fetus that was aborted in 1985 in the Netherlands. Aborted fetal cell lines were used to manufacture and develop the J&J COVID-19 vaccine.
- The Oxford vaccine is produced in genetically modified human embryonic kidney (HEK) 293 cells.
- The Pfizer and Moderna vaccines involve HEK293 cells, which also came from an aborted fetus in the Netherlands (in 1973).
- The vaccines contain ethanol, or cholesterol and a myriad of other poisons.
- Porcine trypsin and foetal bovine serum were used during the development process of the Oxford Astra Zeneca covid-vaccine.
- The AstraZeneca-Oxford vaccine is a chimpanzee adenovirus-vectored vaccine. This means that the company took a virus that normally infects chimpanzees, and genetically modified it to avoid any possible disease consequences in people.
- And much more unknown filth yet to be revealed...

The Shariah does not permit the introduction of poison, najaasat or any haraam substance into the body to combat a future hallucinatory disease. This method of the atheists does not find accommodation in any principle of the Shariah. ***It is Haraam – pure and simple.***
